## **We found what we needed at Flaman**

My name is Howie Mercer, Plant Manager at Souris River Seeds in Weyburn, SK. We are a bulk processing facility that specializes in buying and cleaning pulses for all over Saskatchewan and Alberta. We are responsible to get this product cleaned and shipped out to port to meet our customer needs overseas, as well as take care of the growers that we have purchased the product from. Our facility was a seed cleaning plant that needed some minor upgrades to be ready to ship for export. We found most of what we needed at Flaman whether it be bins, equipment, or even pipes and fittings. It has been nice to be able to rely on a business that can supply you with what you need in a timely manner and also take care of what was sold to you. We have found that with Flaman Sales.

Howie Mercer, Plant Manager  
Souris River Seeds, Weyburn, SK

## ***"Thanks for making us a success."***

**Warren Schmidt**  
Division Manager

In April 1996, I joined the Flaman team with an idea for a new division. Since Flaman already had their hands in most sectors of the agriculture industry, and I had experience in the grain industry, we figured that it only made sense to team up and create a grain cleaning and handling division within the group of companies. I began doing on-farm demos with a Forever Rotary Cleaner, continually asking farmers how we could serve their needs better. A few years later we answered back with the development of a screen division where we custom built screens and frames for all makes and models of grain cleaners. We continued to adapt to the industry and customer needs by picking up and experimenting with different lines of equipment. Seventeen years later, Flaman Grain Cleaning offers a full screen manufacturing division, various lines of grain cleaners, bucket elevators and other handling material, colour sorters, service and install crews, and most importantly, the experience and expertise that we pass on to all of our customers to make sure they are satisfied with the service they receive. What has given us success in the industry is our ability to offer our customers a complete package start to finish. We supply the equipment, the install crews, and the service technicians for every item that goes in and out of our doors. On behalf of the division and myself, I would like to thank each and every one of you for helping us get to where we are today. It's been an enjoyable 17 years, and I can't wait for the next 17!

– Warren Schmidt

# Specialists in Grain Cleaning

***“Whether you’re a small farm or large operation,  
Flaman Grain Cleaning is there for you.”***

At Flaman, we know grain cleaning. Our staff is very experienced and ready to help. We have more than 45 combined years of experience in the grain cleaning industry. That’s experience you can trust.

And we have the products and solutions for all your cleaning needs. We keep lots of cleaners in stock, so there’s no need to wait. Flaman also houses Western Canada’s largest inventory of perforated material – whatever size or type of screen you need, we can make it.

Our customer relationship doesn’t end with a sale. We service what we sell and have a dedicated service team and large inventory of parts to help you out.

# Satake Colour Sorters

## Happy with colour sorter service

Forty-four years ago I started cleaning grain with my uncle at 125 bu/hr using only a 22sg Carter indent and (2) 245 Carter air/screen machines. Five years later I started cleaning with a 300 bu/hr mobile that I designed myself. I later built my third mobile that will do between 400-500 bu/hr and is mounted on a tandem truck. Although I have been cleaning grain my whole life, and it was when the ergot market took off in 2009/10 that I started dealing with Flaman Grain Cleaning and Handling and built my next two mobiles. These mobiles were strictly designed for colour sorting. I'm happy with the service that Flaman has provided me over the past few years and look forward to continuing this relationship in the future.

Gary Gorday  
Gorday Seed Cleaning

## Alpha Scan 96

- » Compact, low cost, high capacity color sorter
- » High-speed, digital signal, processing technology
- » Multiple high-resolution CCD cameras front and rear
- » Self monitoring with auto calibration during operation
- » Multilingual touch screen
- » Very high ejector density

### **For excellent service and support**

*"Providence Grain Solutions is a successful, dynamic, and innovative locally owned grain and crop input company that has been in business since 2002. Our grain handling operations clean, dry and blend grain to meet regulatory standards and customer specifications. In 2010 we identified a need to improve the quality of wheat we were shipping. This required adding some cutting edge equipment, which led us to Flaman Sales. After purchasing our first colour sorter from them we found the service and support to be excellent. We decided to add a second colour sorter the following year and immediately turned to Flaman to supply it. They were once again reliable, competitive and genuinely concerned with our operation. We will consider Flaman for any of our future projects."*

# Grain Cleaning Services

## Committed to service

My name is Sheldon Ball and I've worked with Flaman in the Grain Cleaning division for almost a year. I am a colour sorter field service technician. One of the most exciting machines available for grain cleaning (in my opinion) is the colour sorter. The colour sorter has been around since the 1950s but with the speed of technology today, companies like Satake are able to manufacture machines that sort very efficiently and fast. Our workhorse of the prairies is the Satake Alpha Scan II High Flow, which is capable of sorting wheat at up to 25 tonnes per hour! We also sell and service a full color spectrum sorter called the Evolution, which is capable of sorting any defect the human eye can detect. I said before that I work with Flaman, not for Flaman. This is because of the truly collaborate effort of all the employees here who commit to customer service. We all work as a team, and play as friends, which makes Flaman a very rewarding place to work. I truly love solving problems and I enjoy meeting all our customers in the field across the prairies.

Sheldon Ball

### ***Flaman has been with us from the start***

*We operate a seed processing plant near Morse, Saskatchewan. Nearly 12 years ago we built the original version of our seed plant. The original plan was to clean our own organic crop for sale and maybe do some cleaning on the side. Several renovations and expansions have happened over the years, which has taken us to operation full time, 12 months a year.*

*Flaman has been with us from the start with equipment, parts, service, and advice. We will continue to call on Flaman for our future requirements. It is nice to deal with people who know who you are when you walk through the door.*

# Specialists in Screens

**CUSTOMER  
APPROVED**

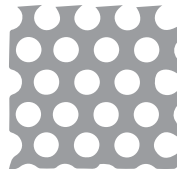

## Screens have come a long way

Thirty-five years have disappeared since I first started cleaning grain. I started with the common farm grains and then got into food grade, where we have to guarantee 99.9% purity. I have cleaned most everything from amaranth, to dill seed, to spices; from as far away as the Peace River area to Manitoba, the American border to Hudson Bay. Cleaning grain has changed in some ways in my 35 years and yet stayed the same. Grain is still graded by length, by width and by weight. When I started cleaning, colour sorting was unheard of. The equipment has been refined and made more operator friendly. One of the biggest changes to me is in the screens. The old screens were made of zinc with wood frames; new screens are steel with aluminum frames. Whatever my needs are I know I can count on Roy or Jeff from Flaman.

# Specialty Equipment

*Get a competitive advantage!*

## FOSS Protein Tester

- » Know what you have to offer ahead of time
- » Segregate your grain based on protein levels
- » Be more competitive in the market
- » More accurately forecast your year-end results
- » Comes with 12v adaptor for mobility in the field

This compact mobile instrument is used to test the protein and moisture levels in your wheat and barley (and oil content in canola). Foss instruments use a transmission style to test right through the grain, instead of a reflectance style that just touches the surface. This gives you the most accurate reading which is consistent with over 80% of terminals and processing plants.

## Labtronics Moisture Meter

- » Accurate moisture tests of your grain samples.

## Canola Roller Kit

- » Use this handy roller to check your canola green counts.

## Digital Scale

- » Weigh your grain samples for dockage and moisture tests.

## Berlese Funnel (Bug Light)

- » Test your grain samples for insects.

## Flaman Debearder

- » Removal of barley beards for seeds.
- » Breaks up hard to thrash commodities.
- » Capacity 100 – 300 BPH

# Grain Cleaners

## *Kwik Kleen 772*

- » Hydraulic or electric models
- » 7 augers, 72" in length
- » Keeps up to a 10" auger
- » 4" screening auger
- » Length: 108"
- » Width: 72"

### » Durable Chains & Sprockets

## Kwik Kleen

- » Kwik Kleen cleaners remove fine material prior to drying or storage, so air can flow through the commodity more evenly and efficiently.
- » All models are available with electric or hydraulic mechanisms, and feature easily changeable screens. More than 20 screen sizes are available to accommodate many commodities and are great for sizing malt barley or removing canola from lentils.

### » Tabbed Augers for Additional Agitation

### » Spring Loaded Hopper

## *Kwik Kleen 572*

- » Hydraulic or electric models
- » 5 augers, 72" in length
- » Keeps up to a 7" or 8" auger
- » 4" screening auger
- » Length: 108"
- » Width: 58"

### **Flaman was with us through our upgrades**

Pulselink Ltd. (2009) is a legume processing plant located near Rosetown, SK, in the Village of Zealandia. Being owned and managed by Lakeside Global Grains gives us the opportunity to market our product worldwide. Pulselink operates three plants on site processing red and green lentils and splitting red lentils. For the past two years Pulselink has achieved multiple major upgrades and improvements to its material handling and processing equipment systems. Flaman and Pulselink worked cooperatively in the development, purchasing and installations of these key projects; successfully maintaining budget and installation schedules. We are capable to provide a premium product to meet the high quality demands from our customers worldwide.

### **Flaman takes good care of me**

*I manage and own a grain farm in west central Saskatchewan. My dad introduced me to the grain cleaning business as a means of diversification of our operations in 1995. The business has really grown since. In 2002 I set up a second mobile cleaner with more capacity and a gravity separator to keep up with the growing client list. With prices rising in agriculture, farming soon took a turn for the better. I downsized to one large cleaner instead of running two, it seemed to make more sense. Currently I am farming 5400 acres, owning most of it, and still running one big cleaner I designed and built myself. I know my dad would be proud! He started me out with the guys from Flaman Sales and they're still taking good care of me. Thanks Flaman!*
